

Virtual Desktop Infrastructure

An IT infrastructure that can support user-centric computing requirements and offer speed, reliability and security is vital for user productivity.

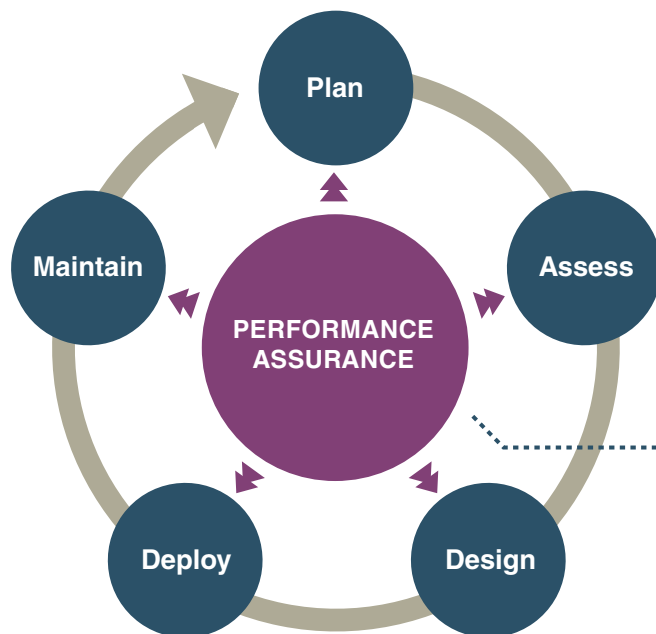

With technical capability and experience in IT infrastructure and systems, PCCW Solutions provides a well developed virtual desktop infrastructure (VDI) solution to assist you in improving your workplace efficiency.

Through a single platform system, administrators can easily handle, manage, support and deliver the virtual desktop and associated applications to every end user without the need to install and maintain in each individual device. Once the end users are connected to the virtual desktop server, they can operate their corresponding desktop anywhere anytime.

Tailor-made models to suit your business need

PCCW Solutions' VDI service provides a tailor-made model based on your specific business requirements. With flexibility and scalability, users can upgrade the solution to more advanced versions with additional features and functions to cater future needs.

PCCW Solutions also provides technical support for all components and editions to help you maintain your work efficiency and run your business smoothly.

PERFORMANCE LESSONS

- Build performance assurance into VDI from the start
- Mitigate risk of VDI failure downstream
- Process vs costly ad-hoc fixes
- Ensure scalability & deliver ROI

Performance Assurance is central to any successful VDI deployment

Features and benefits

- **Maintain workspace consistency** – unified workspace allows secure delivery of desktops, applications and online services to end users, enabling coherent user experience across connections, devices, locations, and media
- **Reliable storage platform** – automate storage provisioning and pool collectively with flash drives and hard disks that attached to server by a new storage technology, and transform them into a reliable virtual storage
- **Dynamic resources allocation** – optimize, manage and deliver on-demand desktop service through a software-defined data center, which provides virtual storage, computation and networking
- **Inheritability of application migration** – ensure local applications to be functionable after migration to the virtual data center
- **Lower complicity to manage** – a single platform to strengthen control and delivery of virtual desktops and applications, as well as protection of user computing resources across physical, virtual, and BYO devices, locations, media, and connections
- **Greater flexibility** – provide hybrid cloud through both cloud-based deployment and on-site architectures

About PCCW Solutions

PCCW Solutions is a leading IT services company in Hong Kong and mainland China.
